

Linux VPS guide

Linux commands are purple

Download and install Cerberus

```
wget http://cerberuscoin.com/client.sh
chmod +x client.sh
./client.sh
```

Run Cerberus and get address to which you need to send CBS

```
cd Cerberus
./cerberusd
cerberus-cli getaccountaddress 0
```

Send exactly 1000 CBS to this address.

After you're done, generate **MastnodeKey**. Then stop the client.

```
cerberus-cli masternode genkey
cerberus-cli stop
```

Open Cerberus cofiguration file

```
cd $HOME/.cerberuscore
nano cerberus.conf
```

Now add these, each in the new line:

```
masternode=1
masternodeprivkey= MastnodeKey generated via cerberus-cli masternode genkey
```

Now press CTRL+X, Y and ENTER

Start wallet and if you have 15 confirmations on your masternode collateral, you can start the node

```
cd $HOME/Cerberus
./cerberusd
cerberus-cli masternode start
```
